C

Comfort spring

C

Made of SAE9254 steels, tested by over than 600,000 times compression inspection, deformation less than 5%. High strength sophisticated surface dealing, durability was highly improved.

A Damping Force Adjustable

Through a mechanism providing expansion/ suppression steps for damp adjustment and exquisitely designed damp valve, which delivers precise control, our shock absorber operates smoothly on all road surfaces.

D

Single cylinder design

Larger cylinder and piston design, advances driving stability and dexterity.

B aluminum Upper Mount

aluminum upper mount can enhance controlling performance.

E

Aluminum Bracket

Processed of T6061 aluminum alloy by the method of an organic whole shaping to lighten the weight and enhance controlling performance. And specific anodizing with surface.
